## School phone-in

Computers are once more making news in the field of education. Two rival computer networks are to be set up which will make it possible for all Britain's secondary schools to be linked via the telephone.

The Prestel Information Service will be launched on 1st January 1985. Richard Hope of Prestel said: "It has been developed over the whole of this year and will be extremely important to schools in three particular areas."

The first is its link with ECCTIS, the Open University's databank. This contains information about courses available at all Britain's universities, polytechnics, colleges and institutes of further education.

It will also enable schools to download educational telesoftware so that curriculum information can be exchanged

## Rent a game

Next time you pop in to your local video shop, why not take home a computer game for the evening? It should cost you about 50p and you'll be able to choose from a range of arcade games for the Spectrum and Commodore.

Wildest Dreams, the company behind the operation, was set up to rent out specially written games through video outlets. Together with PSS, it is making available an initial range of seven titles, and aims to have reached 4,000 video outlets in the next few months.

George Armstrong, product manager, explained how the company came to be formed. "Chris Kilburn, my partner, realised that there was a gap in the software market for rental through video shops. He has social connections with one of the directors of PSS, and since we didn't want to be renting out other people's tapes, we set up a deal with PSS to release games exclusively for rental."

And Wildest Dreams doesn't present a threat to the industry,

HCW12a

At last, a game all Spectrum owners can  
enjoy — 24 exciting screens that will prove  
challenging, infuriating and, even worse,  
madly addictive!

Sir Lancelot must storm the castle,  
undaunted by such dangers as birds,  
bouncing balls, dogs, stars (and even  
cooking pots with legs??!!).

Your task is to collect the various precious  
objects scattered throughout the castle — a  
task that sounds easier than it is.

Great animation and high resolution make  
this the game to beat.

- Arcade/strategy
- 24 screens
- Up to 7 aliens per screen
- Moving stairways
- Suitable for all ages
- 100% machine code
- For any Spectrum

From front page

according to Mr Armstrong. "There's room for expensive, full-priced games and budget ones. We will be in direct competition with the budget-priced ranges."

One problem which immediately springs to mind is software piracy. But Mr Armstrong believes that computer games rental could help solve the problem of software theft.

"We're legitimising the whole rental thing," he said. "We're doing something to try to control piracy and we're catering for people who just want an evening's entertainment. In fact, commercial piracy will be impossible since the games won't ever be sold, so if we see pirated versions for sale it will be obvious they've been illegally copied."

Mr Armstrong claims that the reaction to his scheme has been "tremendous". And his launch range is only the beginning: "This is definitely an on-going situation," he said. "We're looking around for more titles and we will be expanding our range." The campaign will be backed by nationwide advertising.

Martin Alper, managing director of Mastertronic, market leaders in low-cost tapes, commented: "It's a load of nonsense. They are intending to rent these tapes at 50p a night, yet it will take people time to get used to the game. I think at 50p to rent the company will lose money because it will cost them money to process the rental."

He also pointed out that most people want to attain a certain level of skill on their games, which usually takes some time. "In the end I think it will cost more than buying," he said.

*Wildest Dreams, PO Box 84, Coventry*

## School

From front page

between schools through the telephone from one computer to another.

Pupils using this sort of service will gain valuable experience in the use of new technology which will be important to them long after they leave the classroom environment. The service will almost certainly become well established in schools. The breadth of information it can contain is enormous."

The rival to Prestel's service is called Times Network and is

also due to be launched very

soon.

Times Network offers a similar service and Steve Bacon, education adviser, said: "Now pupils will learn to use the technology they'll meet as soon as they leave school for the high street of business."

So far 4,000 schools have agreed to join the scheme and it is hoped that the new networks will also attract teachers who have had no experience working with computers.

Chris Knowles of Prestel said: "It's like one window in a department store. The education facilities will draw the schools in".

*Prestel, Prestel Headquarters, Telephone Hse, Temple Ave, London EC4Y 0HL*

*Times Network, The Times, 200 Gray's Inn Rd, London WC1X 8EZ*

## Computer dateline

THE Computer Advisory Service is a new organization which operates a Dateline type of set-up with the aim of matching you with the perfect computer.

At a cost of £6, your answers to a questionnaire will be fed into a computer (what else?) and the computer chooses your soul mate for you.

*Computer Advisory Service, 16 Birkdale Dr, Leeds LS17 7SZ*

## Import games at lower prices

SYSTEM 3 has acquired the rights to software produced by Californian company Tronix. Three games, Motocross, Juice and Suicide Strike, will be released for the Commodore 64 at £7.95. Normal import price is £24.95.

According to System 3, most American software is released over here in the £9.95 price bracket, so this company is breaking new ground. Mark Cale, managing director of System 3, negotiated the deal with Derek McLeash of Tronix and has plans to release the range of MSX, Amstrad and spectrum.

Motocross is self-explanatory; Juice is a Flip and Flop-type game in which you control Eddison the kinetic android, while in Suicide Strike you must destroy enemy radar bases before they destroy you, in a Buck Rogers-type game.

*System 3, Southbank Hse, Black Prince Rd, London SE1*

Money changes hands between Derek McLeash of Tronix and Mark Cale of System 3

forests, cities and volcanic mountains. There are more than 3,000 scenes, each with colourful 3-D graphics, as well as 360 degree scrolling so that you can look all around you.

The challenge of Aztec is to interpret a strange, disturbing dream. You must restore the lost sun to your world.

Included in the purchase price of £7.95 is a full-colour poster with a spell-breaker, instruction booklet and keyboard overlay. Available on the Spectrum, Aztec is Microdrive-compatible.

Two further releases from Hill MacGibbon are King Arthur's

## It's time for bed . . . said Zebedee

ALTHOUGH rumours have been abounding for a number of weeks, CRL has only now officially released The Magic Roundabout for the Spectrum.

Based on the original TV program, written by Serge Danon, the game revolves around Dougal's attempts to build a sugar house. He is not helped by his fellow characters, who persist in eating the sugar cubes to get energy.

CRL is promoting this game as a non-violent arcade game — "nobody gets killed" and the game is now available at £6.95. Commodore version will follow shortly.

*CRL, CRL Hse, 9 Kings Yd, Carpenter's Rd, London E15 2HD*

Quest and Gun Dogs. The former's an adventure, while Gun Dogs is an arcade game. King Arthur's Quest features 3,200-plus scenes and your quest is to free the realm of an icy mist issue by an ice-dragon. All the usual features — spells, unicorns, dragons — are included.

In Gun Dogs you must shoot down flying game and guide your retriever across the landscape to fetch the bird. Mind out, though — there are numerous obstacles and dangers to avoid.

*Hill MacGibbon, 92 Fleet St, London EC4 1YD*

## CBM 64 BASIC

BREDEN'S BASIC, for the Commodore 64 costs £39.95 and, according to Visions, the manufacturers, incorporates high resolution colour graphics, structured programming techniques, multi-colour graphics, user defined character graphics, music and sound synthesis and toolkit facilities.

With 135 commands, Visions is claiming that Breden's BASIC is the most comprehensive BASIC available for the Commodore. Available on disc and tape, Breden's BASIC runs on less than 8K, leaving you plenty of room for program development.

The program is accompanied by a manual as well as a user registration document which enables you to update your software as and when Visions brings out new releases.

*Visions, 1 Felgate Mews, Studland St, London W6 9JT*

# Do you want to expand your mind

## or lose weight?

Home computing isn't all fun and games. The Mirrorsoft Home Discovery series of software programs can help broaden your knowledge and experience or even assist you to lose weight.

### **KNOW YOUR OWN PSI-Q**

How strong are your Psi powers? This intriguing and comprehensive package, by Prof. Hans Eysenck and Carl Sargent is based on their book published by Michael Joseph. It checks for and helps develop latent Psi ability in individuals or groups of individuals – notably clairvoyance, recognition of hidden objects or symbols, and precognition, foretelling future events.

On cassette for the CBM64, Spectrum 48K, BBC B, Electron. **£9.95**

### **KNOW YOUR OWN PERSONALITY**

A fascinating way to get through to the 'real' you. Devised by Prof. Hans Eysenck and Dr. Glenn Wilson from their Pelican book of the same name. You'll get a clearer insight into yourself, and others too.

On cassette for the Spectrum 48K, BBC B, Electron. **£9.95**

### **STAR SEEKER**

Published in association with the London Planetarium. This pair of programs, written by Dr. Paul Phillips FRAS, brings the magic of the heavens into your home.

Star Seeker accurately plots the most prominent stars from any position on Earth; at any time in this or the next century. You can obtain information on individual stars, and draw constellations. Solar System plots Planets and Halley's Comet, with us next year!

On cassette for the BBC B (Spectrum 48K and CBM64 versions coming soon). **£9.95**

### **MASTERMIND**

Adapted from the well known BBC TV quiz game, this program lets you take the chair for general knowledge and special subject questions. It comes with two sets of each. Up to four players. Further low-cost packs of questions coming soon.

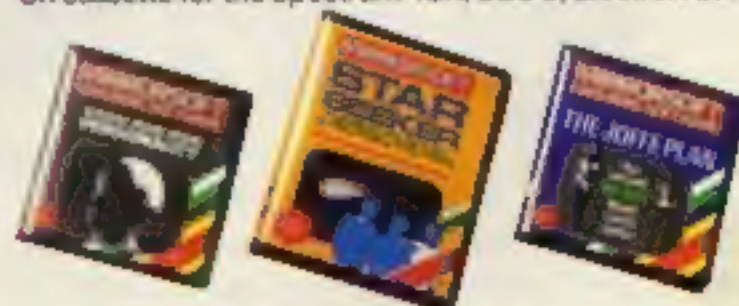

On cassette for the Spectrum 48K, BBC B, Electron. **£9.95**

### **THE JOFFE PLAN**

A 'no-diet' personal weight control program. Prof. Joffe's Plan awards credits or penalties based on progress to a target weight agreed between the user and the computer. Food is the best reward for an over-eater. So credits earned allow you to indulge a favourite dish. Penalties mean less food, more exercise.

On cassette for the CBM64, Spectrum 48K, BBC B, Electron. **£9.95**

Also available: Mastermind QUIZMASTER – Set your own questions to run on the Mastermind program. On cassette for the Spectrum 48K, BBC B, Electron. **£5.95**

**MIRRORSOFT**  
SOFTWARE FOR ALL THE FAMILY

Available from Boots, W. H. Smith, Spectrum and all good software stockists. Write for free catalogue to: Mirrorsoft, Holborn Circus, London, EC1P 1DQ.

## Python saga

**TERRY Jones, star of Monty Python, signed copies of his computer adventure game The Saga of Erik the Viking at W.H. Smith recently.**

Based on his book of the same name, the adventure is produced by Mosaic Publishing.

"It's a real extension of the book, not a retelling of the story", said Terry Jones. "Playing the game, even I don't know what's going to happen next".

Amstrad version of the game will be available next month, while the Spectrum, BBC and Commodore versions are currently retailing at £9.95. Included in the price is a 20-page booklet, containing extracts from the book.

Mosaic Publishing, 187 Upper St, Islington, London N1 1RQ

Terry Jones eating his new software

## Texas special

**FOUR** games for the TI-99/4A have been released in time for Christmas. They are: Santa and the Goblins, Quasimodo — both £7.95 — Snout of Spout and Shuttle Attack, both £5.95.

If you send 50p to Intrigue, you will receive a catalogue which shows screen shots so that you can see the game before you buy it.

Intrigue, Cranbrook Rd, Tenterden, Kent TN30 6UJ

## Duo games bonus

**ANIROG** is branching out into duo tapes — software which can be played on both the Commodore 64 and VIC-20. Kong, Flight Path 747 are old favourites now available for both machines, and new releases include Las Vegas, Tom Thumb and Minipedes.

Part of the reason for this innovation is so that users can upgrade from a VIC-20 to a 64 and still use the same software.

Anirog, 29 West Hill, Dartford, Kent DA1 2EL

## Bring back the sun

**AZTEC** — Hunt for the Sun God is the title of a new adventure game released by Hill MacGibbon. Promoted as one of its range of "Games to stretch the mind," the company claims that it's a game of imagination and logic suitable for all the family.

You can wander at will through a South American landscape of

## Santa's spree

**IT MAY** seem early days, but Icon has released Merry Xmas Santa — "an extravaganza of arcade action and fun", according to Icon.

Santa's task is to deliver presents to all good children. However, he has hazards to encounter, such as marauding snowmen, flying snowballs and dropping icicles. But Santa has some treats in store: he can eat as much cake, plum pudding and sherry as he can on his travels.

Merry Xmas Santa costs £5.95 on Spectrum and £7.95 on BBC/Electron.

Ultron and Wongo are two arcade games also released by Icon at the same time. Both cost £7.95 on the BBC/Electron.

Icon, 65 High St, Gosforth, Tyne and Wear NE3 4AA

## Steve Davis stars on your screen

**SNOOKER** superstar Steve Davis has signed a contract with CDS to produce a new snooker game. Steve Davis Snooker, for the Spectrum, is Microspeech-compatible and follows on the heels of Pool. CDS states that it spent a considerable amount of money on researching and developing the game, and Mike

Lamb, author of Pool, wrote the program.

Features include reset previous facility, accurately definable spin, infinitely variable speeds and highest break table. Commodore, BBC and MSX versions are scheduled for release soon, and the Commodore version will also be Microspeech-compatible.

To make the launch CDS will be running a snooker competition, while Steve Davis will be making three personal appearances at chain stores to promote his games.

CDS, Silver hse, Silver St, Doncaster DN1 1HL

## Stocking filler

**HERE'S** an idea for stocking-fillers — if Father Christmas can afford £11.50, that is: the Rexel home computer starter kit. What you get is a cassette demagnetiser and cleaner, cassette cleaning solution, programmer's pad and pencil, and template.

Packed in a PVC wallet with full instructions, the kit "contains all the basic essentials needed to

organise, operate and maintain a cassette driven micro", according to Rexel.

Rexel, Gatehouse Rd, Aylesbury, Bucks HP19 3DT

## Briefly

audiogenic is moving into business software with its Professional Series for the Commodore 64. There are three new releases: Micro Magpie Database, Micro Swift Spreadsheet and Micro Wordcraft Word Processor. At £39.95, £19.95 and £24.95, Audiogenic is stating that these programs are "a price breakthrough in business software, making it possible, for the first time, for home users to enjoy the benefits and convenience of the computerised office."

Audiogenic, 39 Suttons Industrial Park, London Rd, Reading, Berks RG6 1AZ

**THE** Scottish Home Computer and Electronics Show will be held at the Anderston Exhibition Centre in Glasgow from Friday November 9 to Sunday November 11. It's the second year the exhibition has been held, and Acorn will be displaying its Plus 3 software. A computer swop shop will be held, and entrance costs £1 for adults and 50p for children.

Scottish Home Computer and Electronics Show, Anderston Exhibition Centre, Glasgow G2 7PH

## Track down that money

**LAUNCHED** at a champagne breakfast on October 31, Eureka! is an adventure game with the incentive of a £25,000 prize at the end of it. Released by Domark, the game involves five adventures and the ultimate aim is to discover the mystery telephone number — dial this number and you will all the money.

Domark is a new company formed by Dominic Wheatley and Mark Strachan, and has its background in advertising. An extensive national promotional campaign will no doubt stir up public interest. The company claims that Eureka! will occupy well over 300K of memory, making it the largest computer game ever sold in this country.

At the launch a French version was being displayed and the game will also be marketed in the USA, Canada and Europe. Available on the Spectrum and Commodore, Eureka! costs £14.95 on tape and £16.45 on disc.

Domark, 228 Munster Rd, London SW6

Eureka! It's pots of money

## You could be on our pages

We welcome programs, articles and tips from our readers. If you feel that your work meets our standards, please submit it to us for consideration for publication.

- Programs must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.
- Articles on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.
- Tips are short articles, and brief programming routines. Your hints can aid other computer users.

All submissions will be acknowledged and the copyright in such works which will pass to Argus Specialist Publications Ltd will be paid for at competitive rates.

Keep a copy of your work and include an SAE. Label everything clearly and give a daytime and home phone number if you can.

All work for consideration should be sent to:

Paul Liptrot, Home Computing Weekly,  
No. 1 Golden Square, London W1R 3AB

## It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or in the cinema.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints.

If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code.

Then, if an advertisement bothers you, you'll be justified in bothering us.

The Advertising Standards Authority. ✓  
If an advertisement is wrong, we're here to put it right.

ASA Ltd, Dept 2 Brook House, Torrington Place, London WC1E 7HN

This space is donated in the interests of high standards of advertising.

# Psychology

Get your computer to analyse your character. Impossible?  
Not with Dave Edward's Dragon program

This is a program to introduce you to the ancient art of numerology.

Many people throughout the ages have believed that numbers can have a profound effect upon people's lives. Why not try out this program and see whether you agree with them?

For the program to be most effective you must type in the name by which people usually call you. So if your name is David but you are normally addressed as Dave then use Dave for the purposes of this program.

Once you have typed in your name the computer will give you your personal number and an analysis of the general characteristics of your

**How it works**

- 10 GOSUB to title screen
- 120 prompt for input
- 130-160 remove individual letters of name
- 170-270 convert letters to values
- 290-410 add integers to provide personal number
- 430 prints personal number, reads and prints character analysis
- 560-590 another GO routine
- 600-660 introduction

personality.

Will you agree with your computer's assessment of your character? Will you find out new facts about yourself? The only way to find out is to type in the listing.

**TORTOISE**

**£6.95**

Bug-Byte, Mulberry Hse, Canning Place, Liverpool

The title is a play on words because the object of the game is to fill an oil can from a constantly dripping source

Once the screen is filled it is taken to the bottom of the screen, and the action of emptying builds up a car

When the car is fully built up it moves off onto the next screen. Each screen is made up of floors, or levels, with ladders, ropes, spring loaded platforms etc. All the time you are attempting to fill the oil can

Some Arabs, wielding wicked looking scimitars, are after you. Once your paths collide there is a fierce scuffle, and you are

promptly disposed of. Another thing to bear in mind is that the Arabs like things to be tidy. If there are tools lying around it is a good idea to gather them up. I found the game playable, but not what I would call addictive. B.B.

**PLUTONIUM PLANNER**

**32K BBC £6.95**

Program Power, Sheepscar St South, Leeds

If you are the kind of games player who likes to show off your lightning reflexes, your planning and foresight then this could be quite a treat for you

This game is just a little too hard and fast with rather too much happening at once. It starts in a familiar way with a number of blocks to move around or crush while you are pursued by four angry gnomes. The instructions suggest you should first get rid of them and I concur; crushing them with a block is the most effective method

After this you must move three radioactive canisters around the screen and through a gap into a

pen. Unfortunately there is a gate across the gap to slow you down and time is of the essence. If you take too long the number of blocks starts to multiply at an alarming rate. Any further dilly dallying causes the walls containing the "nuclids" to break down and the megapods" to appear, at which point life becomes rather a transitory experience

Good graphics and ideas but just too much, for me at least

D.C.

**Swag BBC B £6.95**

Micro Power, Sheepscar Hse, Sheepscar St South, Leeds LS7 4AD

The object of this game is to steal £250,000 in diamonds. A sense of humour lies behind the creation of this game as you control your man collecting the valuables and deposit them at the bank or shop whilst avoiding the Henrys or Percys! There are Smileys which can help you and police cars which can be a nuisance. Your opponent is deadly

This game is unusual because it is a two player game with a practice option just to get used to it. Believe me you'll need it! However, once you've mastered the movements you need an opponent and here's no version against the computer. Just as well as it's difficult enough as it is

The keyboard version is as good as it can be with two hands at opposite ends and there is an option to define your own control keys. Otherwise the joystick version is preferable

At the beginning of the game you can change some of the variables to give you an unlimited supply of bullets

An all action, high speed arcade game with only the one screen. Very enjoyable. M.P.

# Money, money, money

Money, oil, plutonium, diamonds — they're all desirable resources and they all feature in this set of new software reviewed especially for you

**POKER**

**£6.95**

Tom Pinone, 14 Granby Ave, Harpenden, Herts AL5 5QR

With your back pay burning a hole in your jeans, you ride into Tucson and tie up outside Molly's Saloon. Inside, you see Matt D'Fon, Black Jake, Mayor Billy the Kid, Joshua Smith and Doc Holiday playing poker

Dropping your \$1000 on the table, you draw up a chair

The rules are simple. You have five cards and you see or raise until raising stops, discard and draw up to 3 cards, then see or raise until the showdown. Molly offers advice when asked and instructions and prompts are enough to teach you the rudiments if you didn't know how to play

Your companions cuss and shoot a lot — good poker players but bad losers.

The display is excellent, with each player's remaining money and bets shown, and facility to speed up or slow play

It's some years since I last played poker but, if the betting level is five and I raise ten, shouldn't I have to put five plus ten into the pot, not just ten?

This aside, I had fun for a while and losing doesn't hurt your pocket. It's a change from zapping. D.C.

**Dragon £14.99**

Harris Micro, 49 Alexandra Rd, Hounslow, Middx TW3 4HP

The problem encountered on the cassette version of this program, the inability to report file loading errors and abort in a reasonable manner, no longer exists with this disc version. Coupled with speed of access this presents itself as a powerful and versatile package

This program enables you to create a file with its own account structure, limited only by the capacity of the disc. You can make a VAT analysis of your transactions, work out your budgeting requirements and get a forecast over a stated period. You can operate your accounts over a normal calendar year with the option of continuing given your current balances

The display and layout is in the highest resolution black on buff. The program uses a 42 column by 24 row screen with upper and lower case lettering with an option to print all information

One has to spend time getting used to the system but the 24 page manual is clear and provides helpful hints. When I transferred my accounts to this I was amazed at how effectively and clearly it presented them in a systematic fashion. This needs a Dragon disc drive. M.P.

# on the

**This program by Karl Hardman sets you a maze challenge. Find your destination but look out for the rocks!**

This is a classic escape game which should test your skills and frustrate you.

You start at the bottom of the screen and you must attempt to reach your destination in 55 moves. It sounds easy but it's not because there are hazards strewn along your route to hinder you on your way.

Be careful to avoid the rocks placed haphazardly around the screen because if you hit one of these the game is over. There is also a wall bordering the screen but it's not as innocent as it looks — it's electrified!

On your way you can collect humans and this will give you 200 points for each one.

You need the cursor keys for controls and if you find your way blocked by rocks press the escape key and this will start a new sheet without canceling your score.

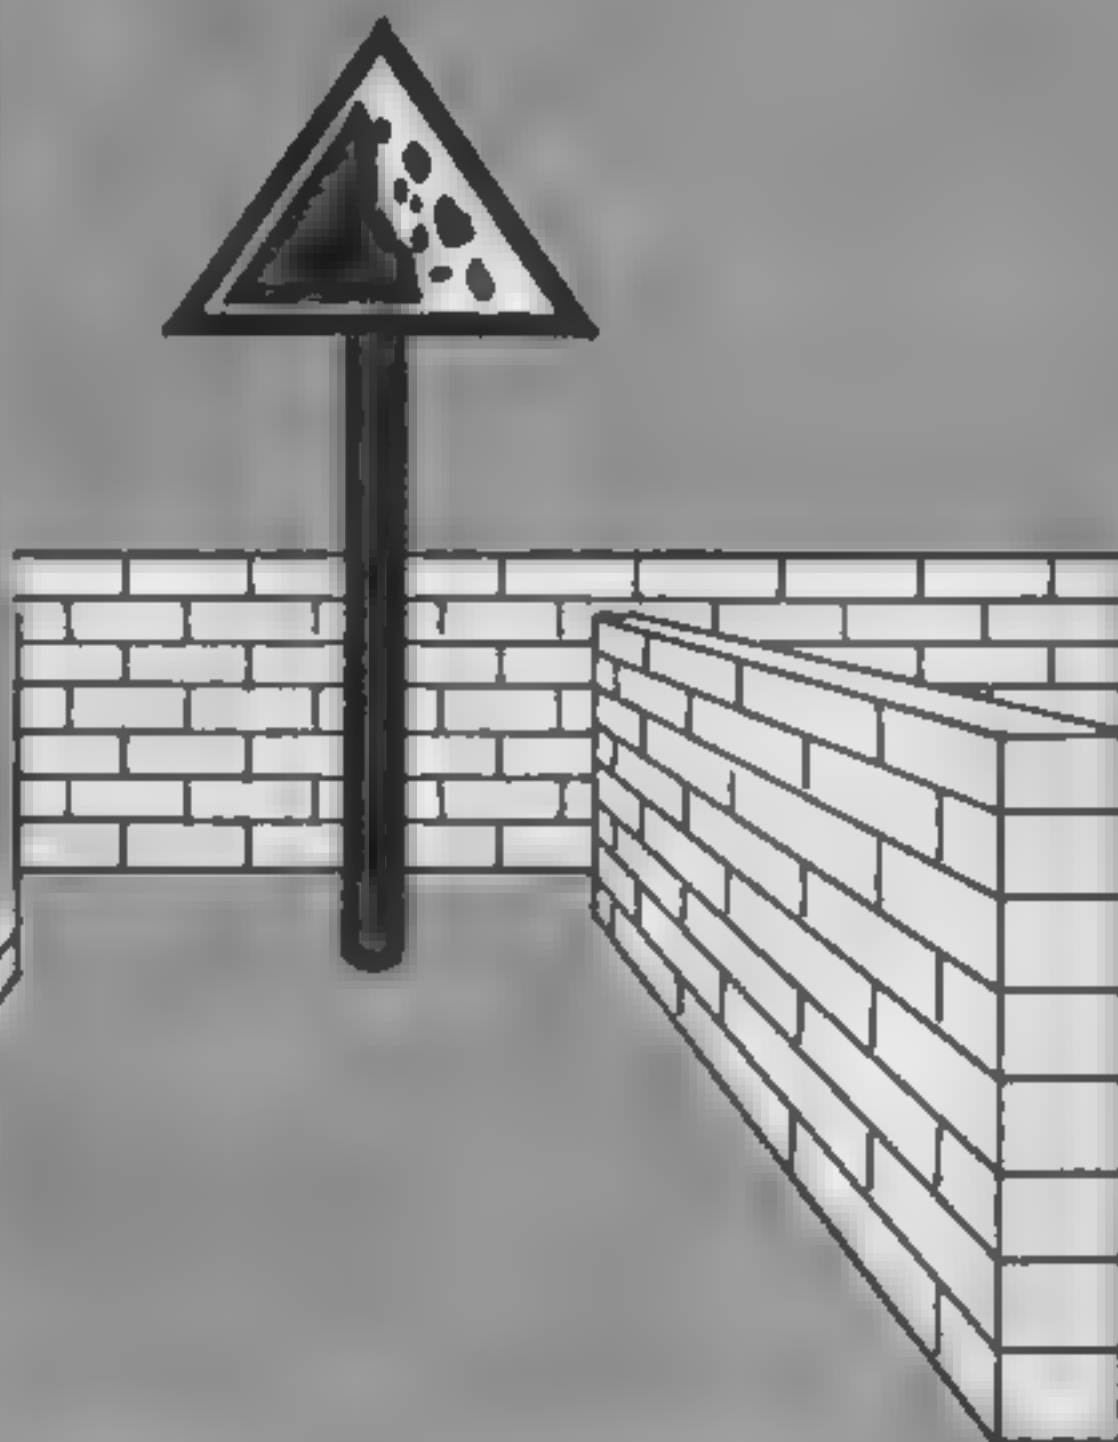

SAVE the program before running as there are a number of calls which are used to make the sound when you move.

#### Variables

G,T your position  
D,F position of humans  
M moves  
S score  
U bonus

#### How it works

50-80 change colour, turn to text mode, clear top line  
110-150 music and instructions  
160-190 change colour, plot wall, rocks and humans  
200-210 plot start and destination  
220-230 plot score and number of moves left  
240-250 movement of your object, sound when you move  
251 starts different sheet if escape key pressed  
252-257 check if hit anything, points etc.  
258 checks if any moves left  
259-260 plot more rocks  
261-262 define characters  
263-264 print final score after collision with rock  
265-266 end of maze, add bonus to score and play tune  
267-268 run out of moves, print score, play tune, option of another game

```

## ROLLABALL £6.95

A challenging game of skill, relying on quick wits and steady nerves. Can you keep the ROLLABALL in motion?

All you have to do is slide a piece of track in its path to divert it, trouble is the tracks always disappear when the ROLLABALL moves over them. A very addictive one player game

## THE MOORS CHALLENGE £6.95

An ancient game of strategy and cunning 'Capture' all your opponents counters to win. Play against your Amstrad CPC 464 at any of five skill levels, from simple to advanced or play against a friend, you can even make the computer play against itself

### \*\*\* SPECIAL OFFER \*\*\*

For a limited period only \* Timeslip Software will be giving away one free title with every two titles purchased, so hurry send cheque/P.O.'s payable to ..

### THE SLIP SOFTWARE

STONEBURN WORKSHOPS

\* Offer ends 31st November 1984

**Avalon**  
**48K Spectrum**  
**£7.95**

56b Milton Trading Est, Milton, Abingdon, Oxon OX14 4RX

Avalon, it transpires, is a hill on an island, and this graphic adventure game is all about exploring the rooms set into the hill. The character who you guide throughout the adventure is your astral projection, Maroc, which floats about in response to your commands

Occasionally you may come across a "servant" spell which gives you control over a sprite. As the name suggests, the servant sprite assumes a lot of the hard work for you, opening doors, picking up objects etc

Although I haven't been through them all, there are eight levels, and the eighth level is your

ultimate goal. This is where the Lord of Chaos hides — the real villain of the plot. Once you get the hang of it guiding the astral projection is easy, although some of the doors may be locked, in which case you will need a key. Of course various adversaries are waiting to pounce on you, and deplete your energy level

If you like graphic adventure games with a challenge then I think you will like this. **B.B.**

**Faerie**  
**48K Spectrum**  
**£1.75**

8th Day, 18 Flaxhill, Moreton, Wirral L46 7UH

If you thought good software at a cheap price was impossible, try this! Faerie is a text adventure written with The Quill. It comes with excellent instructions on the B-Side, explaining the scenario and what an adventure is.

The game is described as a surrealistic fantasy, and is a little similar to Alice's Wonderland. You start with strange lights dancing around you. You wave the aspen wand and you are in fairy land. Wander through fields, talk with characters and try to unravel the mystery of this Midsummer Nights Fantasy. Descriptions are long and atmospheric: a bee flies by from

time to time or a little voice sings in your ear. However, the sandman might send you a-dreaming or you may end up buried alive.

8th Day say the game is advanced difficulty. It is also charming and a lot of fun. It made me laugh. There is a save option, but if you want help you will have to send for a hint sheet. A wonderful game. Buy it, you won't be disappointed. **P.S.**

**Fantasia**  
**Diamond**  
**32K BBC/**  
**Electron £7.95**

Hewson Consultants, 56b Milton Trading Est, Milton, Abingdon, Oxon

This is a text-only adventure game and this cassette can be used by both BBC and Electron

There is little doubt that it's one of those fantasy based games which, of late, appears to be less popular than they were a couple of years ago. It has all the usual ingredients: text, puzzles, problems and, thank goodness, a good portion of humour

What is rather special is its excellent vocabulary of over 300 words and its use of full sentence decoding. This means that you can give double instructions or highly specific instructions within the one command

I have to admit that I find this much more satisfactory than the usual noun/verb combination and feel that this is one feature which weighs heavily in its favour

There are a number of poor features however, the most important being the screen presentation. This is quite plain and although it has a split screen, I don't feel that this is very well used. I really cannot see why the room descriptions should scroll off the screen, meaning that you have to keep using the LOOK command. **D.C.**

# Venture into the unknown

Here's a selection of the latest adventure games which have been tried and tested by our trusty panel

**Eureka**  
**CBM 64 £14.95**  
**(£16.95 disc)**

Eureka is a gigantic adventure game. It spans five eras from prehistoric times to modern. Each is a game in itself but they are also linked by a common theme

The screen in the adventures is split into two. The upper part has some very good hi-resolution pictures on it, while the lower part contains a description of the current situation. The music introducing each game is very authentic for the period and the sound effects used during the game are also good.

I played part of the Roman Italy adventure though I didn't get very far. I came across Androcles and the lion and removed the thorn from the lion's paw. Whenever I came

back to the lion he'd got another thorn in his paw; very strange.

I enjoyed Celtic Britain more. I fought a wolf barehanded, and won. Eventually I got shot by a gun. The Celts were always an advanced race.

These adventures are good, but spoilt by the parsing which allows only a limited response to situations. The game comes with a book of associated riddles and clues and the first person to solve Eureka before 31st December 1985 wins £25,000. **L.C.**

instructions	50%

**Ice Station**  
**Zero**  
**48K Spectrum**  
**£1.75**

8th Day, 18 Flaxhill, Moreton, Wirral L46 7UH

Ice Station Zero is an all text adventure written with the Quill. It has excellent on tape instructions. A madman is holding the world at ransom! Only you can save us by battling through the icy dangers of the arctic and reaching his secret hideout. You will have to take on such obstacles as glaciers, yeti, snow ploughs and polar bears, plus the inevitable sub zero temperatures.

Descriptions are long and atmospheric. You start outside a snow covered tent. Wolves howl across the frozen plains. There are plenty of locations to explore, and many objects to experiment with. There is quite a large vocabulary. Help gives the response 'You're a bit off the beaten track to expect help around here!' — the author has a sense of humour.

A hint sheet is available from Eighth Day, although the difficulty rating is 'for beginners'. There are still a few tricky problems to solve. How do you get the primus stove for killing the yeti?

I enjoyed playing this game. It is addictive and fun, and at such an incredible price the value is hard to beat. **P.S.**

# How to protect your programs

**Software piracy is a threat to all programmers. There are a number of tricks of the trade which will help make life harder for the software thief — Allen Webb lets you in on some of the secrets**

One of the biggest problems faced by programmers is software piracy. Consequently, a number of tricks are used to foil the copying and examination of software. I thought it might be of interest to describe some of the commoner wheezes.

First the bad news. It is impossible to prevent copying of cassette-based software since audio methods can be used. Assuming that the opposition is not going to use such methods, there are several ways with which you can protect your software.

The most impregnable program is obviously machine code. It can, however, be disassembled — or can it? There are certain op codes, not implemented on the 6502, which, when used, perform simple jumps. Normal disassemblers cannot handle non-standard op codes, so this is one way of keeping prying eyes out of your code.

Many programmers use BASIC which, unfortunately, is easier to look at. The secret is to use a tweak to prevent listing of the program by some means. One common method is to disable the RUN/STOP and RESTORE buttons to prevent access to the routine. To work effectively, however, such measures must be used with an auto-run tweak

OK, so how do we disable the vital keys? The usual tweak is

`POKE 788,194`

This moves the IRQ vector so that the RUN/STOP is not checked. It has the disadvantage that the jiffy clock is stopped and it cannot be used if you have an add-on cartridge activated. A better trick is:

`POKE 808,144`

This moves the "Test STOP" vector and has no nasty side-effects (except preventing listing ... which we want anyway). The RESTORE button can be sorted with:

`POKE 37150,2`

OK, you've sorted the keyboard. Next come the anti-list tricks. The stop test vector tweak is one way. The other is:

`POKE 775,200`

This moves the 'print tokens' link. I've often heard that changing the BASIC link bytes is a good technique. This will certainly make the program unlistable, but since BASIC is

rebuilt on loading, this method has limited value.

Auto-running a program is a handy technique. Some software uses a machine code routine which sits in page 3 and alters the BASIC warm start and thus force auto run. I won't give details since it would be unfair on the software houses concerned. A simpler method is a small machine code routine (or BASIC using invisible lines) to push 131 (the character string for SHIFT/RUN STOP) into the keyboard buffer

e.g. `POKE 631,131: POKE 198,1`

This will load and run the next program on the tape. The best way of making software difficult to crack is to use several programs each running the next. You would normally check in some way that the previous program has been run, e.g.

**Program 1** machine code kills RUN/STOP and RESTORE, prints a code in RAM and auto runs program 2.

**Program 2** BASIC checks that the correct code from program 1 is in RAM and resets with SYS64802 if program 1 has not been run.

Add a colon to the end and type REM. Type two sets of quotes and press insert once for every character in the line, including the quotes (in this case 17 times). Press delete the same number of times and press return. Now list the line.

It then runs with loading of further programs as required.

It then runs with loading of further programs as required

This sort of scheme breaks down if program 2 is loaded but not run. Clearly you must hide the lines which check for the hidden code in some way. Enter the invisible line. This type of line uses deletes embedded in a REM to erase itself on listing. A message is often added to assist the deception. Consider the line

`10 SYS(1024)`

One last problem is to prevent copying. The tweak is an invisible character at the front of the name under which the program is saved. Any non-printing character string will do, e.g

`0$ = CHR$(2) + "filename";  
SAVE 0$`

On loading, location 833 will contain the first character. You can therefore test to see if the program name is correct. This will trap any manual copying made by the inexperienced

These techniques cannot guarantee protection, but they make life rather difficult.

This Simon-type program is an old favourite — with several original features. You can now win and choose your level of difficulty in this game by Brian Lewis

# Tried and tested

your level of difficulty and then play to win

This Simon-type program is an old classic which has a number of innovative features. For example you can select your level of difficulty, and your choice spans from 1 to 99. This means that you can play as fast as you like.

Once the game starts, you are in command and the computer prompts you between operations. There is no time limit so you are in charge, not your micro.

One original feature is the fact that you can win. Your goal is to get a sequence of 20 correct and as you come closer to your goal, so the rating at the end of the game increases. Your on screen scoreboard shows you how many you have got right.

When the game begins, you are asked to press the fire button on joystick 1 or the copy key. This decides your interface selection with Simon. Choose

### Variables

**n,m,l** count variables in FOR NEXT loops. If first level variable = n. If two nested, variables are m,n, if three l,m,n. See lines 350-370  
**length** length of note sequence  
**up, down, left, right** key codes for these actions: use either joystick or cursor keys  
**pause** empty loop for time delay  
**off** key not pressed or joystick moved  
**off** key not pressed or joystick not moved  
**answer** box number in test  
**number** box number in playback  
**colour, note, box** array for each box number/note sequence  
**praises** rating given at end of game  
**ok\$** proceed message (fire or copy)  
**ok** code for fire or copy (proceed)  
**fire** code for fire button  
**copy** code for copy key  
**level** level of difficulty (1 to 99; 1 is fastest, 99 is slowest)

### How it works

100 GOSUB initialisation  
 110 GOSUB play sequence  
 200-330 input guesses, process them  
 210 GOSUB proceed and score routine, GOSUB title routine  
 220-320 FOR... NEXT loop to read each key, flash square and make associated sound. If sequence incorrect, jumps to 'wrong answer' routine 400  
 Note: in Amstrad BASIC, it's OK to jump out of FOR... NEXT loops: see F.3 of Amstrad's Concise BASIC Specification Manual for details  
 330 checks if game has been won  
 340-390 game won routine. Flashes all boxes and sounds in a ka.eidoscope effect. Resets colours. GOSUB 1200 proceed routine, GOSUBs part of initialisation routine 890, then goes to 110  
 400-470 If answer wrong, plays correct sequence and gives rating  
 500-600 increases sequence length by one and then plays full sequence  
 530-600 play sequence  
 700-1010 initialisation  
 700 defines all variables used as integers, mainly to save computer memory  
 710-740 sets up arrays for

colours and notes used in data statement at 1400  
 760-850 sets up all text windows, links them to associated papers and sets all colours used in the game  
 860 redirects all print statements to central window  
 870-880 draws screen  
 890-900 prints message for choosing input method, either fire button or copy key  
 910 seeds random number generator so each sequence will be different and initialises some of the variables used in the program  
 920-930 waits for fire button or copy key to be pressed and sets message printed by proceed routine (1200) and variables for up, down, left right etc accordingly  
 940-1000 allows user to set game level (1 to 99), 1 being the fastest  
 1100-1130 prints title in central window  
 1200-1240 prints score and waits for user to press fire button/copy key as defined at 930  
 1300-1310 routine which waits until user takes finger off button before proceeding. In this way, slow operators do not skip program segments  
 1400 data for colours and sounds  
 1410 data for ratings

**Blagger**  
**1984 £17.99**

Aligata, 1 Orange St, Sheffield

Blagger was one of my favourite games of last year and, as it also proved popular with others, Aligata has brought out a sequel. The storyline is to some extent the same as in Blagger except that there is a slight twist.

Here, rather than finding money by collecting keys, the purpose is to find a route around the complex National Security Headquarters. There are still keys to find and collect but these are incidental to the mental activity of working out a safe route.

The twist is that unlike normal ladders and levels games, in this one you are only allowed to see a small section of the building at any one time. You have to build

up your mental maps and then try them out by trial and error.

There are a number of passive and active guards within the building, ranging from moving floors to killer owls. My particular favourite is the deadly vegetables but then I never did eat my greens as a little boy. A h

**Jinn Genie**

**1984 £17.99**

Micromega, 230-236 Lavender Hill, London SW11 1LE

Once upon a time I'd have gone overboard about a game like this. But the yardstick by which games are rated nowadays has improved so much that I was impressed, but not overwhelmed.

There are enough variations on standard themes in the three screens to make it interesting. On the first you pilot a magic carpet. On the second you scramble round trellis-work and window ledges, and on the third it's stairways between different

levels. This sequence repeats with the action getting faster and more furious as you go.

There's a keyboard/joystick choice, clear instructions, a pause key, but no high score

table and fast load.

The feature that I found most novel was the dual movement control on screen one. Our hero on the magic carpet is armed with a Sphere of Oblivion. Normally you move him, but pressing fire switches control to the sphere enabling you to intercept and destroy your attackers. As a result you have to develop a balance between dodging and attacking in quite a unique manner. Perhaps it's worth buying just for that. B.J.

**Mission**  
**1984 £17.99**

Quicksilva, PO Box 6, Wimborne, Dorset BA21 7PY

Apparently this two-part game is based on graphics used in a TV programme produced by central I haven't seen the programme, but if the game is anything to go by then I haven't missed much.

The first part of the "mission" is to participate in an uninspired and rather dull shoot-the-aliens game with black blobs meandering about a tiny screen while the background pulses in technicolour. Although technically quite good, it remains a tedious task.

In part two, you are invited to steer the robot Zog through a printed circuit maze while being pursued by RAM chips and two — or is it four? — resistors. The aim is to pick up "faulty ROM chips" off the board and cart them back to the mother ship (sic). Again quite smooth graphics but the game lacks originality.

This game would be best suited to younger players as it lacks the pace and style dedicated game-players look for. The sound is not too impressive either, although colour and smooth animation are handled professionally. Judging from the quality of some other Quicksilva games, this is a bit of a let-down. D.A.

**Off the wall**

**These games have a touch of novelty, an element of originality. Read our reviewers' thoughts before you buy**

**Acronium Dog and the Death Mountain**  
**1984 £17.99**

Quicksilva, Palmerston Park Hse, 13 Palmerston Rd, Southampton SO1 1LL

This is yet another of those cassettes with bright green labels and leader tape which we associate with Quicksilva. I must admit to liking their cassette packaging although it is wasted on a game like this one.

The object of the game is to guide your man through a long planet surface, avoiding the various beasts, rocks, etc. You have a facility to fire at anything which gets in your way — this helps play quite a lot.

The screen layout tries to give a 3D type of effect. This is fine except that each object moves as

if it is flat and ruins the idea of adding depth. A radar at the bottom of the display shows the area you are currently in.

This is obviously meant for children and not advanced joystick-destroying games freaks. The one thing which I find slightly disturbing here is that the cassette has two extremely sharp prongs sticking out of it which can easily cut any unaware fingers. K.J.

**The Search of Angria**  
**1984 Spectrum £17.99**

8th Day, 18 Flaxhill, Moreton, Wirral L46 7LH

In this budget priced, text only adventure, you play the part of Cobol, a James Bond type secret agent. You must solve the mystery of a stolen communications satellite and the connected death of a C.I.A. agent. You start in London — you can either go by taxi to Heathrow airport (and catch a plane to Brazil — the only place you can go to from London) or go to the British embassy. Here, your boss Omega will give you a Ferrari with built-in guided missiles. This is necessary in Brazil as a variety of people will try to kill you.

This is not of the same standard as other 8th Day adventures. The game leads you to do what the author wants. You have no choice. You cannot explore very much, which is half the fun of adventures. You often cannot go back to previous locations, indicating poor use of The Quill with which it was obviously written.

The game is too easy and I do not recommend it even at the cheap price. Try another game from the same series. The instructions are excellent. P.S.

instructions	100%

**Earthquake**

Mirrorsoft, Holborn Circus, London EC1P 1DQ

I must confess to having been put off this game by the difficulty I had in loading it. My poor Commodore does not like the Speedy Loading system it employs. A game would have to be very good indeed to compensate for such severe loading problems. This one just doesn't make it.

The objective is to build a hotel on an island paradise, by picking up bricks with a helicopter, then placing them in position. Earthquakes, hurricanes, floods or other disasters undo much of your good work. The building targets you set are uncomfortably high, and my chances of meeting them seemed remote.

The instructions and the demonstration game suggest that the skill lies in correctly positioning your bricks so as to minimise the damage done to the building, but I found that to be the least of my worries — the hard part was manoeuvring the helicopter into position to pick the bricks up: a frustratingly tricky task.

I liked the demonstration game, and the fact that two people can play at once if you have two joysticks, but the game itself has limited appeal. M.N.

**Mr Ee 32K BBC £6.95**

Program Power, Sheepscar St, South Leeds

Of all the games I have played recently this is the one at which I am most successful but, rather than give me the impression that this must be a good program, I am of the opinion that it doesn't contain the addictive element which a great game requires.

Copying an arcade game which has a similar name, the aim is to wander around underground eating cherries. You are a wizard, thank goodness, and have a crystal ball to bounce against the umphs, diggers and maras which chase you, after emerging from their central base. The umphs follow the tunnels, the diggers take the fastest path possible and the maras only pursue you if you eat

the fruit left at the base. Added to this are bonus letters which you must capture and which give you an extra life while falling apples kill the chasers.

Graphics are good and clear but the lack of a high score chart is surprising. Overall, just a little too tame for most arcade freaks I feel.

D.C.

**Builder Ben CBM 64 £1.99**

Scorpio Gamesworld, 11 Fennel St, Manchester M4 300

The most astonishing thing about this game is its low price, considering that it is a professionally written good quality game.

The scenario is that you take the persona of Builder Ben, a small hard-hatted figure who has to scale a brick wall to collect tools with which to build houses. Intent on thwarting his plans are his foreman who throws rocks at him, a green brick-beetle which flies about, and a pink one-ton weight. Each is animated very well in sprite colours.

Having successfully gathered three tools, Ben goes on to build a house. On a coloured scaffolding, he scales ladders and collects bricks which drop down to form rather dubious dwellings. Again the militant tools march about intent on his literal downfall. This time help in the form of shields protect him from the marauding hardware.

Builder Ben is a well written game with good graphics and passable sound. Even at a standard price it would be hard good, but its low cost makes it an offer you can't refuse. I would probably get bored with it eventually but it's well worth a try.

**Building on good foundations**

**Build a hotel on an island paradise, avoid rockfalls... it's a hive of industry**

**See-Saw**

Quick Silva, Palmerston Park Hse, 13 Palmerston Rd, Southampton SO1 1LL

Quick Silva is insulting our intelligence by producing a game like See-Saw. The principle is so simple and has absolutely no lasting interest at all.

The screen consists of two towers, one at either side, and a wall of blocks between them. At the bottom of the screen is a see-saw.

An Evil Lord walks from side to side at the top of the wall and pushes the blocks down on to the see-saw. If anything is on the other end it may get propelled upwards and over the wall. As objects fly up, green ghouls catch them. Once all the green ghouls have caught a block and are off the screen you should try to get

over the wall to rescue some members of the brotherhood.

A fast-loading system is used to load the game — it seems quite effective and no problems occurred.

A small point worth mentioning is that the cassette case supplied with the game has two extremely sharp edges on it, these are unnecessary and have no function but could easily injure you.

**Ball Bearing**

Program Power, Sheepscar St, South, Leeds

This is a winner and what's more it has a measure of originality which is missing from many recent releases. Like the previous titles which feature Felix, you control a little man with a great propensity for falling over dead.

The aim is to rid the factory of the evil weevils which wiggle around the place at a surprising rate of knots. The factory is full of conveyor belts which take the product — ball bearings — from the site of their creation to the despatch department. Unfortunately the ball bearings are rather lethal and tend to shorten your life expectancy.

Added to this it is very easy to fall off a moving belt and this too is a rather terminal occurrence. To help you there is anti-weevil spray (just enough in each can for one squirt), a lever to change the belt direction and oxygen bottles.

Graphics are great and very smooth, the screens are attractive and well laid out and the addictive magic of a winner is obvious. Watch out for the super-weevils which hide in the tubes!

# Meteor

Dodge the meteors to dock the ship in this fast-moving game written by Martin Gohrey

As commander of a space vessel in the depths of a peril-filled galaxy you must attempt to dock your craft with the mothership.

Sounds easy? It would be if it wasn't for the meteors. They come thick and fast and it requires all your experience of commanding spaceships to achieve a successful docking whilst dodging the on-coming meteors.

If you're really skilled and manage to achieve the high score then you also have the chance to enter your name. Use S for right and O for left.

So have a go and look out for the meteors.

#### Variables

## Zaxxon CBM 64 £9.95

U.S. Gold, Unit 10, The Parkway Ind Centre, Heneage St, Birmingham B7 4LY

This is the official version of this arcade classic for the CBM 64, and very classy it is too. The 3D graphics are excellent, showing your spacecraft, complete with shadow to enable you to judge its position accurately, flying over asteroid cities and through deep space. Sound effects are pretty good too.

I was immensely impressed by the load sequence. Now that fast-load systems are more or less standard on CBM games, U.S. Gold has gone one better to give you a title screen, signature tune — Stars and Stripes Forever — and countdown of the number of blocks remaining while the game loads

The game itself is all that a good arcade game should be: simple enough not to demoralise beginners too much, yet sophisticated enough to challenge arcade aces. Once you have learnt to negotiate the first asteroid city successfully, you can go back and see how many more of the enemy gun emplacements, tanks and radar towers you can destroy. Having learnt how to fly through deep space dodging the enemy fighters, you can try your hand at shooting them instead

My only regret is that it isn't British! M.N.

value for money	90%

## Ant Attack CBM 64 £8.95

Quicksilver, PO Box 6, Wimborne, Dorset BA21 7PY

This popular 3D maze game has been converted for the 64 from the original Spectrum version, and seems to have benefitted from the change

For those hermits who don't know the game, the idea is to steer a boy or girl — your choice — through the 3D city of Antescer, a strangely abstract place of geometric solids, to rescue a member of the opposite sex trapped somewhere within. To hinder your attempts the city is crawling with deadly ants which chase and bite you. Twenty bites signals your being 'eaten alive'. You do however have a supply of bombs which are effective against the insects.

The graphics on this version are exceptional, with the facility to view the scene from four different angles. The city is drawn with crystal clarity, and the game itself is fast and challenging

It requires some practice to get the best out of Ant Attack, but is well worth it. My only criticism is that the sound is virtually non-existent, a probable carry-over from its Spectrum counterpart, and that the instructions are a bit limited. D.A.

instructions	40%
playability	80%
graphics	90%

## Storm Warrior CBM 64 £7.95

Front Runner, K-Soft Distribution, 620 Western Ave, London W3

Front Runner describes this game as a "fast-moving graphics adventure". It has 12 screens and five levels of play, utilising a massive 38K of RAM. My opinion is that it is a total waste of time and thought just looking at it

The screen is fairly dark, although the occasional flash of lightning may appear in the background. The graphics are not of a very high quality. Most games look addictive to watch and have any viewers anxiously waiting for a go. While showing a friend Storm Warrior I was informed that it was boring — he didn't want a go either.

Play ranges from hitting an energy sphere around the screen and fighting off enemies to dodging bombers.

The instructions waffled on quite a bit and didn't get straight to the point. A mention of the last seven screens is made but you are not told what to do perhaps the author got fed up playing after screen five and gave up.

I wasn't very impressed with this game and would not recommend it as fun or enjoyable to play. K.I.

# It's war! Can you survive?

These games all have one thing in common — you're in a hostile situation with enemies around you

## Sir Lancelot Spectrum £5.95

Melbourne Hse, Castle Yard, Richmond TW10 6TF

Step back in time and become a knight in shining armour! You are Sir Lancelot and must explore twenty-four rooms of a castle. To reach the next screen you have to collect several flashing objects, by leaping about on platforms and up moving staircases. Out to stop you, of course, are a time limit, birds, dogs, pacmen and cooking pots with legs.

Here we have yet another arcade adventure. The important difference is that this game will run on any Spectrum. This is a remarkable programming achievement, but I wonder how many 16K owners remain

Indeed Sinclair are discontinuing advertising it soon anyway.

Still, the game is pretty good. The graphics are startlingly smooth, definitely up to standard, and very fast. The aliens are well defined although there are not very many varieties due to memory limitations

Colour is very good, there is a wonderful opening tune, but why does it have to play the funeral march very slowly every time you lose a life? This mars the playability

This is a good game, fast enough to be addictive, and a must buy for 16k owners. P.S.

## Beach Head 48K Spectrum £7.95

U.S. Gold, Unit 10, The Parkway Ind Centre, Heneage St, Birmingham B7 4LY

This is the first game I have seen advertised as "all American software" and I hope it's not the last. Once loaded, you go through the usual preliminaries: redefine control keys (a good feature), choice of joystick, and skill level, etc.

For one or two players, this game begins with a map of the general area. A formation of dots shows the enemy fleet position, flashing dots indicate your position, while a flashing square indicates a hidden passage. Should you choose the passage, you must navigate rocks, mines and torpedoes

My favourite is going straight to the enemy position. This pitches you into a battle against enemy bombers which take off from both ends of distant aircraft carriers. Your defence is a pair of guns in front of you which move left, right, up and down, and of course, fire. Altering the elevation will alter the range in a very realistic manner.

Having gone through that phase you then have a battle against enemy ships. The final phase is the battle for the beaches, against tanks. Very positive response to the keyboard controls, and a very addictive game. Super! B.B.

# How to use Atari operating system

This technical article by Frank O'Dwyer, shows you how to use your operating system to send and receive data. You'll need an Assembler/Editor cartridge

One of the things which beginners find most difficult when they write programs in assembly language is input/output, i.e. printing text to screen, reading from the keyboard or cassette, and so on. On some computers, you have to read books and magazines until you find out the address of a ROM subroutine which you can call to do the job you want to do. However, what happens if a new version of the ROM is brought out and your ROM routine is now at a different address? It's tough luck if your program was a best selling game, as it won't run on the new ROM.

Some computers, notably Atari and Commodore, get around this problem by featuring a central operating system to take care of input/output. On such machines all you need do is connect a 'channel' to the device of your choice (say the screen). Then you send or receive characters using that channel, and the central operating system makes sure that these characters are sent to (or come from) the appropriate device (the screen in this case).

The beauty of this system is that you can write a program without regard to where its input will come from, or where its output will go. Once your program (say it's a word processor) is written it's simply a matter of connecting the channels to the appropriate device (so your output may go to either screen or printer, and your input may come from either keyboard or disc, for example).

This article explains how to use the Atari's central operating system (called CIO, for central input output) to send and receive data to and from devices (screen, cassette, etc.) from assembly language. Since most of you will already be familiar with Atari BASIC, let's use that as a starting point. You should note, however, that CIO is not a part of BASIC (in fact it is quite possible to use CIO without BASIC or any other cartridge in place). There is, however, a great similarity between using BASIC's PUT and GET commands and the way CIO works. This isn't surprising really, since BASIC uses CIO for these commands!

Suppose you wanted to translate the following BASIC to assembly language:

```
10 CLOSE #1: OPEN #1,8,
"E:": REM OPEN A
CHANNEL TO THE
SCREEN EDITOR
PRINT #1;"SOME
```

```
TEXT": REM PRINT A
STRING TO THE
SCREEN
30 CLOSE #1: REM CLOSE
THE CHANNEL SINCE
WE'RE FINISHED
```

The code to CLOSE a channel is given in Listing 2, but first look at Listing 1 and Table 1. Listing 1 is the start of the assembly language equivalent to the BASIC program and defines the important constants for use with CIO. The entry point for CIO is \$E456. Table 1 shows the command codes for the operations CIO can perform (close channel, open channel, put characters, etc). These are the same as BASIC's XIO command values, and it's worth looking up the BASIC manual for clarification (especially on the FILL command).

Line 1080 of the code to CLOSE a channel (Listing 2) designates the channel in use (\$10 denotes channel one, \$20 channel two, \$30 channel three, etc). It is essential that the X register is used for this since CIO expects the channel number in the X register. Line 1090 loads the accumulator with the command code for 'close channel' and line 1100 stores this in the command code location for channel 1. Line 1100 actually calls CIO to close the channel.

Now we need some code to OPEN a channel. Listing 3 does this. Again, the X register is loaded with the channel number (\$10 since we are using channel 1). Line 1140 loads the accumulator with the command code for 'open channel' and line 1150 stores it in the command code location (where CIO will look for it). Lines 1150 to 1190 store the '8' and '0' from OPEN #1,8,0,"E:" into

the special locations reserved for this purpose.

Designating the device name ('E:') is a little more tricky. First, we must set up the string "E:" in memory. This will be done later on in the program, for now assume that the place where this happens is labelled NAME in the Assembly language. Next, we must store the low and high bytes of the address of this string in the special CIO locations used for this purpose. Lines 1200 to 1230 do this. Finally, line 1240 calls CIO to do the OPEN.

Finally, we must PRINT the string "SOME TEXT." to the channel and close the channel again. Listing 4 contains the assembly language to do this. As always, the X register is loaded with the channel number (line 1260) Lines 1270 and 1280 instruct CIO to 'Put a text record'. This requires some explanation. A text record differs from a binary record in that it may be terminated by a carriage return (character code 155). With a binary record, exactly the number of characters you request are output from your string, so if you say there are 20 characters in your string then 20 characters will be output regardless of how many carriage returns are present.

With a text record, if you say there are 20 characters in the string then up to 20 characters will be output, with output stopping if there is a carriage return in the string. It is often handy to say there are 65535 characters in a string, and to terminate it with a carriage return, since it saves you having to count the characters.

Lines 1290 to 1320 store the address of the string (or text record) into the buffer address locations used by CIO, while

lines 1330 to 1350 store 65535 as the string length (by storing a 255 as both high and low byte, giving the maximum number that two bytes may hold, 65535, or 255\*256 + 255). As explained above, the string is not really 65535 characters long, but this doesn't matter since we will terminate it with a carriage return.

Finally, line 1360 calls CIO to do the donkey work of outputting to the string. Lines 1380 to 1410 close the channel as before. The BRK command is simply to return control to the monitor when the program finishes if you are using the Atari Assembler/Editor cartridge. It should have a similar effect with any monitor program for machine language. If you want to try the example out just assemble it to page 6 (\*\*\$600) and type the following commands while in the Assembler/Editor cartridge:

```
BUG (to enter monitor)
C600 (to run machine language)
```

The example program sends the string to the screen editor device ("E:"), but it is just as easy to send it to cassette ("C") or a screen text mode ("S:"). Simply change the device name string to "C:" or "S:", or any other device name as appropriate.

To input data from a device, use the same approach, except instead of giving CIO an address of a string to output you give it the address of a memory area where you want CIO to put the characters it gets from the device. Naturally, you also use the command codes for 'get text record', etc. rather than the codes for 'put text record', etc. Also, you would use a 4 instead of an 8 when translating OPEN #1,8,0,"E:", indicating that you want to do input instead of output.

In fact, the OPEN command (and its assembly language equivalent) allows you to do more than select whether you want INPUT or OUTPUT. The parameters AUX1 (corresponding to the 8 in OPEN #1,8,0,"E:") allow you to specify options on a particular device. For example, if you are using the screen ("S:") then AUX2 lets you specify the graphics mode you want to use, allowing you to switch graphics modes from machine language! See Table 2 for a complete list of effects possible with AUX1 and AUX2.

Finally, a few miscellaneous notes on using CIO. When you call CIO, (using JSR CIO) the case may arise where the operation you want to do is

# ATARI PROGRAMMING

impossible (say a tape won't load, or the cursor has gone out of range on the screen). In this case, BASIC would give you an error message.

Machine language has no error messages, however, so CIO will return a 'status code' to you in the Y register. This code is the same as the error number BASIC would give you (these are listed in the BASIC manual), so for example if the cursor went out of range then Y would contain 141, for ERROR 141. This gives you a way of error checking, especially useful when working with disc or cassette. Note that error codes are greater than 127, so that you can test for errors using the 6502's BMI instruction.

Command codes 7 and 11 (put/get character) are especially useful. To use them, store 0 in the string length locations. To PUT a character, load the accumulator with the character you want to output and JSR CIO. To GET a character JSR CIO and the character will be in the accumulator upon return.

When working with graphics modes (as opposed to text modes) you are not sending characters to a device. Rather, you are sending COLOUR data to the screen. So sending a 2 to the device will cause the next PLOT location to be PLOTTed. This is similar to writing in BASIC, COLOUR 2 PLOT X,Y except that you can't easily decide X and Y. If you need to plot a particular X,Y co-ordinate then use locations 84-86. Location 84 holds the next Y co-ordinate to be plotted (or printed) while 85 and 86 hold the X co-ordinate in low byte-high byte form.

Simply store the co-ordinates you want to PLOT in these locations, then send the colour you want to plot to the device using CIO. Upon return, the X co-ordinate will have been automatically incremented so that the next time you plot you may not need to alter the X co-ordinate. Note also that sending a 125 to the screen will clear it.

36	baud, stop bits, word size (RS232)
38	translation mode (RS232)
40	concurrent mode (RS232)

### Table 2 AUX1 and AUX2 values for OPEN

AUX1 value	Device	Purpose
2	cassette	read (input) write (output)
8		
4	disc	read
6		read directory
8		write new file
9		append to old file
12		read and write file (update file)
8	screen	screen output

12	editor	keyboard input and screen output
13		screen input and output
4	keyboard read	
8	printer	write
5	RS232	concurrent read
8		block write
9		concurrent write
13		concurrent read and write
8	screen	clear screen, no text window, write
12		clear screen, no text window, read and write
24		clear screen, text window, write
28		clear screen, text window, read and write
40		write
44		read and write
56		text window, write
60		text window, read and write

AUX value	Device	Purpose
128	cassette	sets short inter-record gaps (as in CSAVE)
83	printer	sideways printing
70		normal printing
87		wide printing
0-11	screen	selects graphics mode. If zero is used, then the AUX1 options for clear screen etc. are ignored

# FOR DRAGON AND TANDY USERS

**SATURDAY 17TH AND SUNDAY 18TH NOVEMBER  
10 A.M. UNTIL 6 P.M.**

**THE ROYAL HORTICULTURAL HALLS**

If you own a Dragon or Tandy colour computer this is **your show**.

The **first ever** show organised in the United Kingdom for these machines.

All the very latest **hardware, software, interfaces and peripherals** will be there. Your chance to get up to date, try and buy all **thats new**.

We'll also be organising events and competitions with **great prizes**. The manufacturers will be staffing **advice centres** to help with all your queries.

Exhibitors will have **special offers** on their products so you can **save money** too!

Large gangways and comfortable rest areas will make sure you can see everything and sit in comfort when you want.

This will be a show for the **whole family**, plenty to see and plenty to do.

If you want to miss the queues just clip the coupon below.

**Computer Marketplace (Exhibitions) Ltd. Part of the Rushworth Dales Group, 20 Orange Street, London WC2H 7ED.**

## HOW TO GET THERE

The Royal Horticultural Halls are just off Victoria Street a few minutes walk from Victoria or Parliament Square.

Buses 11, 24, 29, 70, 76 and 88 run up Victoria Street.

Mainline stations; Waterloo, Charing Cross and Victoria.

Underground stations; St. James park (District and Circle lines), Victoria (District, Circle and Victoria lines).

There is an NCP car park in Abingdon Street, a few minutes away.

To: Computer Marketplace (Exhibitions) Ltd, 20 Orange Street, London WC2H 7ED.

Please rush me \_\_\_\_\_ (qty) adult tickets at £2 each and \_\_\_\_\_ (qty) tickets for under sixteen year olds at £1 each for the 6809 colour show. I enclose cheque to the value of £\_\_\_\_\_

Name \_\_\_\_\_

Address \_\_\_\_\_

Postcode \_\_\_\_\_ Telephone \_\_\_\_\_

6809 is the registered name of Motorola Ltd.

# HISOFT

## ULTRAKIT £9.45

The most powerful toolkit yet for ZX BASIC. All the features you will ever need: AUTO insert, full RENUMBER, block DELETE, CLOCK, ALARM, error trapping, break trapping Full TRACE with single-step and much, much more. Makes ZX BASIC easy-to-use and powerful.

## DEVVAC £14

An excellent assembler, an advanced line-editor, a comprehensive disassembler and a superb 'front panel' debugger all in one package. Used by many leading software houses to write their games. "Buy it!" Adam Denning 1984.

## PASCAL £25

A powerful and almost full implementation of Pascal - not a Tiny Pascal. A valuable educational and development tool, programs typically run 40 times faster than a BASIC equivalent. Spectrum version includes Turtle Graphics package. "I haven't seen any other compiler that could match Hisoft's Pascal"

**HISOFT**

# POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates
- PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES
- SUCCESSFUL SELEC** guarantee that Poolswinner performs
- ADAPTABLE** Probabilities are given on every fixture choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method
- SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below)
- DISC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied

(The program results are supplied with the package so that predictions can start immediately)

AVAILABLE FOR Spectrum 48K, Commodore 64, VIC 20 (+16K), AMSTRAD CPC 464, BBC B, Atari (48K), ZX81, 16K, Dragon, Apple II, IBM pc

**PRICE £15.00 (all inclusive)**

**NEW** **FIXGEN 84'S** AT LAST No more struggling for hours to get the fixture list into the computer. Programmed with all English and Scottish fixtures for 1984-5. Simply type in the date and the full fixture list is generated in seconds. Fully compatible with Poolswinner

**POOLSWINNER with FIXGEN £16.50 (all inclusive)**  
 Fixgen alone £5.50

**COURSEWINNER V3** Coursewinner is designed to allow you to develop and test your own unique winning system using information from daily newspapers or Sporting Life - the most important factors can be input and analysed. The program is supplied with a database detailing best trainers and jockeys, and effect of the draw for all British courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum 48K, Commodore 64, BBC B, Dragon, Atari (48K), Apple II

**PRICE £12.50 (all inclusive)**

AVAILABLE (RETURN OF POST) FROM

**selec** SOFTWARE

phone 24 hrs 37 COUNCILLOR LANE, CHEADLE, CHESHIRE. ☎ 061-428 7425

## Lantern Games That Shine

### SOFTWARE FOR THE TI 99 4A

NOW AVAILABLE... NEW FULL COLOUR PACKS

**WONKEY WARLOCK**  
 Guide Wonkey Warlock through the dragons and collecting weapons and spells in order to defeat him. 5 screens of incredible graphics. An absolute must for every Texas owner

**CRAZY COVER**  
 You are Crazy Cover and must face a myriad of hazards. Run, jump, swing on stalagmites, dodge, leap over pits, arrows and balls of fire. Superb graphics and animation. A game you can't stop playing.

**TI BASIC £5.95** **EXT BASIC £6.95**

**LANTERN** 4 HAFPENDEN ROAD TENTERDEN KENT TN30 6QD. 'Send cheque or postal order to'

# Letters

## Everyone's is best

How I agree with J. Ince (HCW 85)! The letters page is usually a combination of 'an't I great' and 'my computer's better than yours, so there!' Having worked my way through four different computers, I reckon most people just don't appreciate their varied qualities.

I started on a ZX81 (who didn't?) which was suitable for a beginner who wasn't sure if computing would be for her. Once I got better (slightly) at programming, I switched to a TI-99/4A. What a lovely machine to use but, oh! the price of games etc. and hardware. I just couldn't afford to keep it up. The kids were cheaper to raise.

So on to everyone's love/hate the Spectrum. We got on fine till it broke down. Two months later I was back in business, for a grand total of four weeks. No way was I going to wait, not two months, but four, for a replacement. 'Twas a fun machine but not good enough. What next?

What, but a CBM 64? Fingers crossed that this one stays put. Up to now I'm more than happy with it. Of course it has faults. They all have, and they all have good points too. So less arguments between owners please. We all own the best, or we'd have a different one wouldn't we?

Congrats on a good mag and roll on the adventure page. Keep up the good work, HCW

Liz Tomlinson, Havant

## In the Family

Last Christmas my parents bought a Spectrum 48K for the whole family and since then we have had some really great evenings using our computer and have never regretted getting it.

However, sometimes we get very fed up that so many games are only for one or two players. There do not seem to be that many games for more than two players and this means that we don't use the computer together as much as we'd like.

I think the software houses are missing out on a large section of the software market by neglecting user families who want to enjoy the great possibilities of their micro together. Why aren't there more games with the family in mind?

We have already got the board game versions of things like Scrabble and Kennington so we are very reluctant to spend more money on the computer versions in case

they have no advantage over the normal ones.

There are very few original computer games for people to play as a group. I think that, as there are so many excellent programmers, they really should try and cater for us.

Apart from this one snag I would recommend any family to get a computer for Christmas. My parents say that they are really surprised that they enjoy using a micro so much. There was nothing like that around for young people of their generation.

At first I think they were a bit wary about it because they were afraid that they wouldn't understand how to use it but soon they were very at home with it.

I think that people under twenty should realise how lucky they are to live at the beginning of the computer age.

Think how much you would have missed if you had been born just ten years earlier.

Graham Busfield,  
Portsmouth

## Micro mum

I am writing as one of HCW's older readers. I am married and have three sons, all in their teens. Recently my husband and I bought them a computer so that they could learn what I consider to be a very useful hobby.

Unfortunately they are rather put out because every time they go to use the micro (it is an Amstrad CPC 464) they find Mum sitting there. I am learning to program and can already help them out with their problems in this and they are quite amazed at my cleverness.

I think that more people of my generation should try this fascinating hobby. Many of my friends have never even touched a computer (Some don't even know what one looks like!)

I started getting HCW for the boys to read but now they rarely get first look at it since I am always fastest to the front door when it arrives on a Tuesday morning.

Please keep up the good work, HCW, and don't forget about your older readers.

Mrs Jane McCarthy,  
Southampton

## Advice to parents

I am writing to congratulate HCW on issue 86 of this great magazine. I was thrilled when the bumper issue dropped through my letter box! I hope this will continue.

The other thing that I want to comment on is the problem that John Ramsbottom wrote about in his letter to HCW 86.

I have a Commodore 64 which my grandparents gave me for my birthday during the summer and since I got it I have had hours of enjoyment and, I believe, I have learnt (and am still learning) a very useful skill.

My parents really support me in this and I find it amazing that anyone could disapprove of such a useful hobby.

If John Ramsbottom wasn't using his computer after school then he could be getting in all kinds of trouble as some young people do. I think his mother and father should be glad that he is spending his time so well and they should look upon it as an investment for the future.

Perhaps a good solution would be for his parents to buy him some educational software for Christmas. I know that there is a lot of it about and I have heard that there are even exam revision programs on the market so surely that would solve the problem of his homework.

Anyway, thanks for listening to my opinions, HCW, and keep up the good work.

Joanna Waller, Derby

## Up the Aussies

Without doubt, HCW is the best magazine in Australia, if not the world! The trouble is, it takes so long to get down under. Would you believe the latest issue here is No. 70 July 10-16?

I can proudly say that Australia has the best text adventure games in the world. They are not your dreary 'You're in a room' type

All feature graphics and a wry sense of humour. One great software house is Mountain Valley Software. Although a Victorian based firm I'm sure they would be glad to receive overseas enquiries. Their address is P O Box 407, Boronia, 3155 Victoria, Australia.

I can highly recommend their games.

Stuart Uihorn, Victoria,  
Australia

## A+ for Spectrum

I get HCW every week and for 45p it is great value for money.

I own a Spectrum + and I feel I must point out that the review in HCW 85 was a bit harsh on this computer.

I turned it upside down and

shook it and none of the keys fell out.

I think your review was unfair to us Spectrum + owners but I must agree that the manual is ace.

G. L. Notts, Nuthall

## Dear CBM 64

Why is Commodore 64 software so highly priced? That's what I want to know. Spectrum owners pay up to £2 00 less and even Amstrad and MSX owners will find that they pay a quid less than us poor long-suffering CBM 64 owners.

I think it's incredible that some games cost about a tenner when dear old Commodore brought out the legendary International Football on cartridge for this price. Stay below £7 00 and that's about right.

Even better, go below that to a fiver in line with records.

On the subject of price, Mastertronic should have been originally named Masterchronic. After some terrible releases, Mastertronic has come back to form with the really brilliant Chiller For £1 99 with five screens, a loading screen, ace music and a great game it's fantastic value. Who needs £9 99 software with super cheapos that aren't so cheap?

Andy Clarke, Baddesley  
Emsay

## Atari says

I refer to the letter that appeared in HCW 85 from a very angry Mike Curtis, who paid £15 for a software title and was disappointed. I don't blame him, he hasn't got the genuine Atari Pole Position.

If Mr Curtis would like to tell me where he obtained what appears to be a very poor rip-off of Pole Position, I would be more than delighted to pass the details on to our lawyers!

Atari's Pole Position for the Spectrum has only been released this week and retails at £7 99. It is similar to the arcade version. It is written in 100% machine code. It features gear changes and you can drive off the roads. There are also road signs and other cars upon the circuit...not forgetting the incredible start grid.

Atari product is quality product, and further to Mr Curtis' eventual advice to readers, I would advise every Spectrum owner to purchase a copy of Atari's Pole Position — it will take pride

of place in their software collection for years to come.

Incidentally, all Atari software for the Spectrum are distinctly packaged in cassette library cases with a blue/green insert. If anyone suspects that they have bought a rip-off of an original Atari product, I would be grateful if they would contact me.

Jon Dean, Computer Product Manager, Atari House, Slough, Berkshire.

## Keyboard

### main

I am one of the lucky ones to have a Dk'ronics keyboard.

The statement in HCW 85 was very true about the Spectrum + keyboard is not better than Dk'ronics. But like owners of the Spectrum +, I, too, am having trouble with the expansion slot, because I cannot use the Kempston Joystick Interface. Apart from that I recommend it to anyone.

Thanks for a great magazine at a great price.

Gary Wilding, Thornden

## Texas tale

I am writing to you because of two things which have appeared in H.C.W. on the following dates: the 1st May 84 (no 60) and the 19th June (no 67).

Both of these things were to do with the Texas, one was a free tape offer and the other a Texas club. Being a TI-99/4A owner I sent for the tape and to become a member of the TI club. It is now over five months since I sent away for the tape and I still haven't had a reply from them yet.

By the way, I should point out they were at the same address, 41 Winchester Street, London.

Thank you and keep the good work up H.C.W.

David Tomkinson, Hull

## Correction

In HCW 86 in the Spectrum programming article on page 30: the fourth column, starting from 'CHARS with the commands' should follow on from the first column 'Finally alter the value of'. Column two should follow on from the end of four and column three should follow this, ending with the two POKES at the top of column four.

We hope that this had not caused too much confusion for Spectrum owners. It did for us!

# Stop that runaway train!

What a headache! Not only must you build a bridge to prevent the express falling in the ravine, but you must also

# train!

dodge enemy fire. David Trillwood and Gary Jowett bring this game of co-ordination to you

**Mission:** to rescue the runaway Orient Express and its passengers. **Resources:** helicopter, winch, bricks and manpower. **Danger:** the train risks being derailed and falling off the viaduct into the ravine, losing its cargo.

Can you save the day? You must quickly and nimbly build up the bridge, so that the train can pass over it and maintain all its passengers in safety.

Full instructions are given on screen. Happy bridge building!

#### Variables

r,z DIM statement for explosives

*VALUE that's out of this world*

## 50 GAMES ON ONE CASSETTE

NOW AVAILABLE FOR Commodore 64, ELECTRON, Atmos, DRAGON, BBC Micro, Spectrum, Apple, ATARI, ORIC-1, ZX 81, VIC 20.

It is impossible to tell you everything about the 50 games on CASSETTE 50 but they include many types such as maze, arcade, missile, tactical and logic games to suit most tastes in computer game playing. CASSETTE 50 will appeal to people of all ages and the games will provide many hours of entertainment for all the family. A fraction of the cost of other computer games.

**WE PAY TOP PRICES FOR TOP QUALITY GAMES**

**EXPRESS DELIVERY ORDER NOW**

Please send me by return of post, Cassette 50 at £9.95 per tape. I enclose a cheque/postal order for

£  made payable to Cascade Games Ltd.

Please debit my  No

# Change the colours —

This fast-moving arcade game stars you changing colours of the pyramid. Watch out, though — Colly the snake is out to get you!  
 By Gareth Wakefield

In this fast-moving arcade game you play the part of HCWbert, a funny looking creature with a long nose.

Your task is to change the colour of every cube of the pyramid shown on the screen. The most frustrating thing is your enemy who comes in the shape of a snake called Colly. He has a habit of changing the cubes back to their original colour. There is also a ball rolling down the pyramid but only on the coloured cubes.

If you have to jump off the pyramid then you must start the whole process again.

If you press the FIRE button then it will pause the game and pressing START, SELECT or OPTION during a game will abort it.

#### Hints on conversion

The game uses a 20 column by 12 rows text screen.

The large amount of data at the beginning of the program is for user defined characters, each line being one 8 x 8 character.

POSITION selects a page or the screen according to the co-ordinates following it e.g. POSITION 5,9.

LOCATE retrieves data stored at a specific screen location which is then put in a variable name e.g. LOCATE 5,9,PP. SETCOLOUR sets the hue and luminescence of the chosen colour register e.g. SETCOLOUR 1,6,10 sets register 1 to hue 6 and luminescence 10.

#### Variables

X,Y co-ordinates of HCWbert  
 A,B co-ordinates of snake  
 C,D co-ordinates of ball  
 %c score  
 Lc level  
 Lc number of lives  
 PP,PP used for storing values of characters in LOCATE statements  
 PA, PB used in setting up LDG  
 Count number of cubes coloured  
 MOVE CHR\$ value of HCWbert  
 QL counter which controls speed at which ball moves  
 SO value of tone in falling off pyramid routine  
 SI stops ball from moving until five squares have been coloured in  
 H,J,V,O,N,T,X used in FOR NEXT loops

800-805 subroutine to print HCWbert  
 810-815 subroutine to print score  
 820-825 subroutine to print snake  
 840-845 subroutine to print ball  
 850-860 subroutine to pause game  
 1050-1075 move snake down right  
 1100-1125 move snake down  
 2000-2270 bonus and tune for completed pyramid  
 2800-2835 killed by ball  
 2900-2960 killed by snake  
 3000-3075 fall off pyramid  
 3100-3370 game over, title screen, instructions

#### How it works

15-155 initialise character set  
 250-325 draw pyramid  
 356-357 display number of lives  
 370-415 change snake co-ordinates  
 430-445 check for joystick movement  
 450-500 change ball co-ordinates  
 505-515 small sound subroutine  
 530-538 move ball left  
 565-572 move ball right  
 600-650 move snake up right  
 650-700 move snake up left  
 700-725 move HCWbert down right  
 725-750 move HCWbert down left  
 750-775 move HCWbert up right  
 775-795 move HCWbert up left

# but avoid the snake!

## Spirit of the Stones

CBM 64 £14.95

Commodore, 1 Hunter's Way, Weldon, Corby, Northants NN17 1QX

Spirit of the Stones is a program and 37-page book which tells the story of a hidden treasure and contains clues to locating its whereabouts on the Isle of Wight. The inclusion of the book presumably justifies the high price.

The program is a mixture of a treasure hunt and arcade action. You wander round the Isle of Wight in search of 40 single diamonds and one large one. There are 21 locations and the inside of each location is like a new level in an arcade game. You have to avoid evil spirits, climb ladders, jump over gaps etc. to

seek out the diamonds or clues. Throughout the game your strength is weakened by attacks from creatures on the island and in the buildings, and you have only a limited time.

Apart from the enjoyment of the game, on solving the clues you can write in and claim against a prize fund.

I found the arcade-type situations quite enjoyable but I would need to be very dedicated to bother solving the clues. The music, while good, is annoying after a time. Verdict: too dear if you want an action game. I.C.

## Jasper 48K Spectrum £6.95

Micromega, 230-236 Lavender Hill, London SW11 1LE

Jasper the mouse must walk, jump and swing his way through 22 screens fraught with danger, to find the key to his house and eventual safety within. There's a lot more to it than you first think, since there is a problem solving/adventure element involved.

Jasper can pick up and hold up to five objects, which can be used later. If you do not plan carefully, you may have to trek back to previous location to collect a much needed object.

The cassette has a demo mode which allows you to view all the screens in turn. I was so captivated by the superb animation and flicker free

sprites, I found this entertainment enough, without bothering to play the game. The movement of animals, throughout is first class. It is so accurately observed, I wondered whether a zoologist had written the programme.

When you finally obtain the key I think your troubles are only about to begin, since Jasper's house is located under an active volcano puffing out red-hot balls of lava.

It's well worth releasing the moths from your wallet for this one. M.B.

## Rolf Morris' Picture Builder

CBM 64 £9.95

Commodore, 675 Ajax Ave, Slough Trading Est, Slough, Berks SL1 4BG

This package consists of two cassettes; the Picture Builder program, and a selection of pictures produced with it. Loading all of the sample pictures was a time-consuming procedure — three of them are shown on the packaging. Surely it would have been easier to show them all, leaving out the second tape.

The sample pictures give you a good idea of what can be achieved if you have patience and skill. They are block graphics pictures, half produced with the CBM character set and half with a special set contained in the program. The CBM pictures are better than the others, some of which — the portrait of Rolf, for instance — are barely recognisable.

The pictures are drawn with a joystick, by selecting a colour and a character from those shown on the screen. Then you move the cursor to the required position and press the fire button. The procedure is simple, my children managed to produce some patterns, though not pictures.

Instructions are given for saving the finished pictures on tape or disc, and for re-loading them with or without the original program. M.N.

# Pick and mix

Choose something from this mixed bunch of new titles. There's something for everyone

## European Knowledge

BBC B £6.95

Micro Power, Sheepscar Hse, Sheepscar St South, Leeds LS7 1JH

This is a quiz type program on the theme of Europe that might appeal to the parent who believes the micro has a reputation to live up to at home. I would be disturbed to find it being seriously used at school as it attempts to cover a lot of ground in a superficial way.

The program uses a multiple choice format colourfully presented at the bottom of a high resolution map of Europe. A flashing cursor points to the part in question and asks you to identify it in the first instance.

Questions are asked about 34

countries. There are five levels of difficulty which affect the time allowed to answer rather than the nature of the question. Marks are given as a percentage on request or at the end of a round of 40 questions.

The program covers such areas as capital cities, industries, famous persons, currency and population. It seemed very repetitive and limited in scope even though the database may be extensive.

There is also the problem of slow loading time: the instructions, data and screen each load separately. M.P.

## Interdiction

CBM 64 £17.95

Supersoft, Winchester Hse, Canning Rd, Wealdstone, Harrow, Middx HA3 7SJ

If you are looking for a gentle introduction to flight simulators then you had better keep looking — this new space flight simulator is dauntingly complex.

It comes with a 48 page instruction manual, which goes into great detail about the theory behind the spacecraft and its weaponry, the various types of craft you are likely to meet, and the working principles, damage susceptibility and interpretation of the instruments and displays.

However, such basic points as how to load and run the program, and which combinations of keys you need, are dealt with sketchily if at all.

You cannot, as I discovered, simply flick through the manual while the program loads. Unlike most CBM 64 tapes these days, it doesn't fast-load. You can't hope to pick up what to do as you go along. This program requires a considerable investment of time if you are to get anything out of it.

This is one for the real enthusiast and if, unlike me, you are sufficiently enthusiastic about simulators to spend this much money on one, you may well find it a good buy. M.N.

# Win Death Star Interceptor, plus a matching poster System 3 Software

**CBM 64 and Spectrum 48K owners  
have a great chance to win  
software and a poster from System 3**

IN THIS week's competition 30 people will win a great prize package from System 3 Software. The package consists of a copy of System 3's chart bestseller Death Star Interceptor for the Commodore 64 priced at £9.99 or Spectrum 48K priced at £7.95. There's also a matching poster worth £3.50

System 3 is a fairly new software company, formed only last February. Death Star Interceptor is System 3's first release and there are plenty more on the way. A Spectrum version of Deathstar Interceptor is due out on 12th November and on the same day three brand new American games will be launched, all at £7.95

The three new games are called Motocross, Suicide Strike and Juice, all for the Commodore 64. System 3 intend to convert all their titles for the Spectrum, Amstrad and MSX.

Death Star Interceptor is a classic

space game. Set in 4021 A.D., it tells the tale of the dreadful threat to the existence of the earth from the evil Ardands.

Earth has refused to supply any more slaves to work in the terrible Aiz mines. The life expectancy of anyone condemned to this fate is only five days. Now the Ardand Empire is taking revenge on the revolutionary people of earth and sending one of its Death Stars to obliterate the planet.

There is only one way to prevent the destruction of the earth. A single earth pilot must penetrate the Death Star's defence of forcefields, laser turrets and fighter craft and score a direct hit on the reactor's exhaust part at the heart of the star. If the fighter succeeds, the reactor will go nova taking the entire Death Star with it.

You are the fighter pilot who has been assigned to this dangerous mission and you must not fail.

The competition is one of our regular spot the difference type of puzzles so the format should be familiar. Hurry up and put pen to paper if you want to save the world.

### How to enter

Study the two cartoons — there are a number of differences between them. Circle the differences on cartoon B and seal the cartoon and coupon in an envelope. Write clearly the number of differences you found on the back of the envelope.

Post your entry to Deathstar Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Entries close at first post on Friday November 23rd 1984.

You may enter as many times as you wish, but each entry must be on an official coupon — not a copy — and sealed in a separate envelope.

**Important:** Please follow carefully the guidelines on entering — incomplete coupons and entries in envelopes with no numbers on the back cannot be considered. If you are a winner, the coupon will be used as a label to send your prize so clear writing is essential.

### The rules

Entries will not be accepted from employees of Argus Specialist Publications, System 3 Software and A. Webster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

The How to Enter section forms part of the rules.

Complete clearly and fully — if you are a prizewinner this will act as a label. Post to: Death Star Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Closing date: first post Friday 16 November 1984. Don't forget to follow closely the advice in the How to Enter section, including writing the number of differences on the back of your envelope.

David Rees shows you how to link up your Commodore with the rest of the universe

# Detecting the outside world

One aspect of the Commodore 64 which is neglected by many users is its ability to interface with the outside world. The major reason for this is expense: all the moderns sold or the circuits that have been published in electronic magazines have been designed for the user port and cost well into double figures. They are useful for control applications, which make them very worthwhile, but for the first time user or someone starting to learn about the machine's facilities, these interfaces are normally considered to be a large extra expense.

The solution may be found

by looking around the corner of the computer at the control ports. These may be difficult to use to control the outside world (the output current is low), but there is the novelty of receiving new channels of information.

The first problem is to find a plug for these ports. Old joystick or paddle plugs will do, but they do not connect to all the pins you will use. Plugs are almost impossible to buy so I had to make my own. To make a simple plug, take nine one-inch long pieces of thin drinking straws. Stick them together into the correct shape by placing them into one of the ports and wrapping Sellotape around the exposed surface (glue can later be added for rigidity).

Through each hole thread a piece of cable with a long length of exposed wire (Maplin's hook-up wire is ideal). Fold the exposed wire in half, one end going within the tube for pin contact, and the other end being stuck to the outside of the tube with Sellotape. Make sure none of the wires touch, and if contact is faulty put small pieces of foil or wire inside the tube. Finally, wrap Sellotape around the leading edge of the plug until there is a snug fit between it and the port.

Next, you must read the values coming in from the port. There are two types of inputs: digital (on or off as with the joystick) and analogue (a variable value as produced by a paddle). Digital signals are received through pins 0 to 4 and pin 6 (see the user guide P141) and are switched when these pins are connected to pin 8. To read these values, PEEK locations 56320 and 56321 (one byte per port) where the first five bits of each location give the five pin values, an on bit meaning the pin is not connected.

The analogue ports behave somewhat differently. To create signals, connect the analogue pins (5 and 9) to +5 Vols (pin 7). These pins measure resistance between themselves and the power source, so the value read varies between zero and 255, and is found at

locations 54297 and 54298 (one byte per pin).

As you can see, there are four paddle pins and only two bytes to read them with, creating a problem. This is solved by location 56320. Bits 6 and 7 determine which port the resistance data is received from. However, changing these values interferes with keyboard reading, and as values are received so quickly BASIC is too slow to be used to read the last two paddles. Machine code is needed, and a short routine is listed here. To run the routine, use SYS 49152, and the byte values of the four pins may be PEEKed from locations 251 to 254 inclusive.

To use the analogue pins you will need a potentiometer with a resistance of 470 k ohms. A three-pin rotary potentiometer is best (and cheapest!) for initial experimentation. To use it, simply connect the centre pin to one of the outer pins and connect the two outer pins to the port as described above.

Now you are ready to open up a whole new world to your computer, ranging from quick, simple uses (e.g. using potentiometers to control sprites or music) to the more diverse (sensing open windows with a switch, for fuel saving or as an alarm). The range of uses is endless, and all you need is imagination, programming sense and some cable.

# TIME BANDIT

Tired of games that have only a few screens or force you to follow strict levels?

Well despair no more!! In Time Bandit, you virtually create your own game! You can choose from "twenty" places throughout the game, with more than "fifteen" distinct variations and levels of difficulty in each place; this means over 300 different variations!!

You must use the "Time-Gates" to travel to each of the 3 different Worlds of Time, each containing a multitude of colourful and unique adventuring areas. Visit the medieval Dungeons of Fantasy World, recapture the days of yesteryear in Western World, and reach for the Stars in Future World. Do battle with the Evil Guardians, Looking Lurkers, Angry Almo, and the Killer Smurphs!! Find the keys and escape with the treasures of time.

Crisp Graphics, Full Colour Animation, Great Sound,  
300 Screens and 100% machine code:  
its all Here!!!

Requires 1 Joystick

*Tandy colour version requires 32K non-extended basic and is available only at Tandy Stores.*
